Orbital Cloud Inc. - Q3 2026 Report

Company Name

Orbital Cloud Inc.

Sector

technology

Ticker

ORBC

Quarter

Q3 2026

Revenue

$482.5M

Revenue Growth Yoy

18.4%

Net Profit

$42.1M

Profit Margin

8.7%

Key Highlights

• Successfully launched the Nebula-4 decentralized satellite data node, expanding orbital computing capacity by 35%.
• Secured a major enterprise contract with a global logistics conglomerate worth $65M over three years.
• Achieved a 99.999% uptime SLA across all active orbital clusters despite solar flare activity.
• Reduced ground-station latency by 14 through proprietary routing algorithms.

Management Commentary

Q3 demonstrated resilient demand for our edge-computing solutions as enterprise clients increasingly rely on space-based infrastructure. While supply chain constraints for specialized optics tempered our hardware deployment speed, our software-defined cloud subscriptions grew at an impressive clip. We remain focused on scaling our operational efficiency heading into the final quarter of the fiscal year.

Risks And Challenges

- Ongoing component shortages for radiation-hardened microprocessors.
- Increasing regulatory scrutiny regarding orbital space debris and spectrum allocation.
- Macroeconomic pressures leading to elongated enterprise sales cycles.

Outlook Next Quarter

We anticipate Q4 revenue to land between $505M and $520M, driven by the rollout of our next-generation security protocols. Capital expenditures will remain steady as we prepare for two additional rocket payload launches in early 2027. We are confident in our ability to sustain profitable growth despite a challenging macroeconomic backdrop.
